

ABSTRACT OF THE DISCLOSURE

A method for selecting to activate personal digital assistant (PDA) or mobile phone in an electronic device is disclosed. The device is operable to select to activate PDA or mobile phone. When the device is enabled, user can select to activate PDA or mobile phone through a menu. Thus a desired PDA or mobile phone is activated for use after the selection. By utilizing this, user may select to activate PDA or mobile phone in the device, thereby preventing from violating flight safety rules by unintentionally turning on mobile phone while taking an airplane. Further, such option can greatly enhance the adaptability of the electronic device, thus attracting more people to use it.
